Portfolio: bacemsakji.github.io

SUMMARY

Computer Engineering student specializing in cybersecurity, DevOps, and cloud infrastructure. Hands-on experience building SIEM/SOAR automation pipelines, provisioning cloud infrastructure as code, and deploying containerized systems with CI/CD. Cisco- and Harness-certified in security analysis and testing orchestration, with active CTF participation and a track record of translating academic training into production-style tooling.

EDUCATION

Engineering Cycle — Computer Engineering · *ENICarthage* 2024 – Present

Scientific Preparatory Class (MP) · *Preparatory Institute of Monastir* 2022 – 2024

Baccalaureate in Mathematics · *Pioneer High School Monastir* 2022

PROFESSIONAL EXPERIENCE

Cybersecurity Intern · *ANCS (National Agency for Computer Security)* Jul – Aug 2026

- Architected a secure SIEM/SOAR pipeline using Wazuh and n8n, automating threat detection, payload transformation, and incident alerting across monitored endpoints.
- Deployed and configured Wazuh agents to ingest, parse, and analyze real-time endpoint telemetry, and built a custom dashboard to visualize incident status.

Cybersecurity Intern · *CIMF (The Computer Center of the Ministry of Finance)* Jul 2025

- Built a FastAPI network monitoring tool with SQLite that automates periodic ARP subnet discovery and targeted TCP SYN port scanning using Npcap.
- Tested with, Wireshark, Nmap, and and validated network packet capture and port scanning accuracy

Programming Instructor · *Coworking Space* Jul – Aug 2024

- Designed and delivered interactive programming courses and video materials for pre-university students.

PERSONAL PROJECTS

AWS Cloud Infrastructure with Terraform · *Terraform · AWS (VPC, EC2, S3, IAM)* 2026-Present

- Provisioned and version-controlled a multi-tier AWS environment using Terraform, enabling reproducible, one-command infrastructure deployment.
- Configured IAM roles and security groups following least-privilege principles, and used remote state (S3 backend) to make the setup collaboration-ready.

DevSecOps CI/CD Pipeline · *Jenkins · Docker · Kubernetes · Trivy* 2026

- Built a Jenkins pipeline to build, test, and deploy a containerized app to a Kubernetes cluster, integrating automated Trivy vulnerability scanning to block images with critical CVEs before release.
- Wrote the pipeline as declarative code (Jenkinsfile) with staged gates — build, test, scan, deploy — so a failure at any stage stops the release before it reaches production.

Cloud-Hosted Honeypot · *Go · AWS · Docker* 2025

- Deployed a low-interaction honeypot on AWS EC2 to capture and log unauthorized access attempts, port scans, and brute-force traffic from real-world attackers.
- Built a custom Go service to parse captured logs, fingerprint attacker IPs and tools, and visualize attack patterns — turning raw traffic into an analyzable threat feed.

TECHNICAL SKILLS

Languages: Python, Java, C, C++, GO

Cloud & DevOps: Docker, Jenkins, Kubernetes, Terraform, Linux, Grafana, Git, AWS (S3, EC2, IAM)

Networking & Protocols: Wireshark, Nmap

Security & SIEM: Metasploit, Burp Suite, Kali Linux, Wazuh, Cryptography, Scripting, IPS, IDS

Frameworks & Libraries: Spring Boot, React.js, Node.js, Figma, JWT / OAuth2

ADDITIONAL INFORMATION

Languages: Arabic (native) · French C1 (TCF) · English (professional)

Certifications: CCNA · Harness Security Testing Orchestration Developer · Cisco Junior Cybersecurity Analyst Career Path · AWS SimuLearn Cloud Practitioner

Activities: CPC Club Member · CTF Competitions
